

SUMMARY OF THE INVENTION:

5 A household appliance, such as a dishwasher, a washing machine, or similar
apparatus, is proposed with an addition unit (9) to add cleansing agent to a cleaning liquid,
which ensures reliable rinsing out of the cleansing agent chamber(s). This is accomplished
according to the invention by the fact that the addition unit (9) is connected with a pressure
line (7) of a rinsing pump (2) to deliver wash liquid to the addition unit (9) in order to rinse
10 out cleansing agent located in it.
